

JIMMY ZHANG

jimmyzhang1@hotmail.com | (778) 893-0800 | [linkedin](#) | [github](#) | [jimmyzhng.com](#)

SKILLS

- **Languages:** JavaScript, TypeScript, Python, PHP, Ruby, HTML, CSS
- **Frameworks & Libraries:** React, Vue.js, Node.js, Next.js, Express, TailwindCSS, Vuetify, jQuery, SASS, EJS, Rails
- **Databases & Cloud:** MySQL, PostgreSQL, MongoDB, AWS (EC2, S3, RDS), Vercel, Netlify
- **Testing, Tools, & Other:** Jest, Supertest, Cypress, Mocha, Chai, Git, npm, WordPress, Figma, Web Scraping, Jira

EXPERIENCE

Full Stack Developer | Leavenly Goods Inc

Jan 2026 - Present

- Engineered a full-stack profit intelligence platform (TypeScript, React, Python, FastAPI) to replace manual Excel workflows, reduced pricing-analysis time by 95% across 25+ recipes and 190+ ingredients spanning wholesale and retail channels
- Designed a real-time cost modeling engine incorporating materials, labor and overhead into per-unit breakeven pricing, uncovering a high-volume product operating at a -51% margin and enabling an operational pivot to achieve +40% profitability (91-point swing)
- Built interactive dashboards (pricing health scatter plots, cost structure comparisons) that gave non-technical stakeholders instant visibility into margin compression, driving the business to reprice 100% of the underperforming catalog within the first week

Software Engineer | Outlier

Oct 2024 - Present

- Develop and evaluate programming tasks with JavaScript, Python, HTML, and CSS, contributing to 5+ projects to advance LLM training pipelines designed to challenge model reasoning, induce failure cases, and improve code output and problem-solving ability
- Conduct peer code reviews focused on validating code execution, reasoning, and adherence to project guidelines, identifying and correcting inconsistencies to improve dataset quality and model reasoning reliability across large-scale AI training workflows
- Maintain a 96% QA approval rating, demonstrating precision, reliability, and adherence to strict prompt-evaluation guidelines
- Utilize peer review data to debug and refine completed programming tasks, improving dataset reliability and model performance

Full Stack Developer | Originality.AI

Aug 2023 - Aug 2024

- Developed and launched 4 AI-powered web tools end to end, independently conducting research to define requirements, building JavaScript frontend interfaces, and designing PHP/MySQL backend architecture, expanding the company's AI product lineup by 44%
- Delivered 15+ PHP REST APIs supporting AI web applications, handling AI content generation, user data ingestion, reCAPTCHA validation, and secure synchronization between Vue.js clients, AWS RDS databases, and server-side components
- Engineered and automated an asynchronous PHP crawler to scan and parse robots.txt data across 1,000 domains for blocking behavior of 17 web crawler user-agents, producing ~17k time-series data points daily for dashboard analytics with MySQL
- Built a Python utility leveraging binary search algorithms to process 20+ years of archival web data, averaging 233k snapshots per domain, to efficiently identify first crawler block dates, optimizing for lowest possible API usage and high query performance
- Led AI crawler bot detection research and data analysis, uncovering patterns in crawler behavior across top domains, with findings cited by [Axios](#), [Business Insider](#), and [Digiday](#), positioning Originality.AI as a trusted authority on AI transparency

PROJECTS

AI Portfolio Chatbot | TypeScript, React, Express, PostgreSQL, LlamaIndex.ts, OpenAI, Jest, Supertest

Nov 2025

- Built an AI-powered chatbot for my website that answers questions about my background using retrieval-augmented generation (RAG)
- Integrated LlamaIndex and OpenAI API to ingest, embed, and index 10+ personal projects and bio documents, leveraging semantic search to deliver contextually accurate, source-grounded responses with a ~4-5 second average response time
- Engineered Express backend with TypeScript to handle chat routing, manage API requests, and serv vectorized document data
- Designed and implemented UUID-based session management and rate-limiting middleware, tracking message counts, timestamps and request limits to prevent API overuse and ensure stable performance under concurrent usage across 100+ user sessions

EDUCATION

Lighthouse Labs

Diploma of Web Development

2023

University of British Columbia

B.A. in Economics, Minor in Commerce

2022

- Involvement: Associate Vice President (Engagement Portfolio), Marketing, and Photographer for Arts Undergraduate Society

AWARDS

Hackathon Winner, WiCS Award | SFU Software Systems RootHacks | Project: [BinIt](#) (AI trash sorting application)
